EXPERIENCE

ANDROID DEVELOPER

MathStack | Capstone Project II

- 03/2026 - Presente
- Developed a native Android math reinforcement app with guided learning, structuring content into progressive levels to support students step by step
- Implemented Clean Architecture + MVVM with Hilt for dependency injection and Coil for efficient visual asset loading
- Built the Kotlin backend with Ktor, exposing a REST API that powers dynamic content in the Jetpack Compose app

ANDROID DEVELOPER

SARC | Academic Project

- 03/2026 - 04/2026
- Developed a native Android app that lets citizens report geolocated incidents in real time, with status tracking from the device
- Implemented Clean Architecture + MVVM with UDF flow to keep UI state predictable across the Jetpack Compose interface
- Managed dependencies with Hilt and backend communication with Retrofit, integrating Google Maps API for visualization and geolocation of each report

ANDROID DEVELOPER

LABKEEP | Academic Project

- 03/2026 - 03/2026
- Developed a native Android app to digitize laboratory equipment lending, eliminating manual paper-based tracking
- Implemented MVVM + Clean Architecture to ensure separation of concerns and scalability
- Designed the relational schema in MySQL and exposed data through a REST API with Javalin, integrating both layers from the Android client

BACKEND DEVELOPER

FiscalTech | Capstone Project I

- 11/2025 - 12/2025
- Built a web platform to automate accounting dispatch operations, replacing manual workflows with payment control and client management modules
- Designed the REST architecture with Java + Javalin behind Nginx as a reverse proxy, structured the relational schema in MySQL, and delivered the full system in 6 weeks using Agile methodology

EDUCATION

Information Technology and Digital Innovation Engineering

Polytechnic University of Chiapas

2024 - Presente

SUMMARY

Fullstack and Mobile Developer with complete end-to-end academic projects spanning React frontend, Java/Kotlin backend, and native Android applications. I work with clean architectures (Clean Architecture, MVVM, REST) and modern stacks on both client and server. I'm looking for my first professional experience to add technical value from day one on a team building real product
